

Creating Custom Radiology Templates

- Last updated April 29, 2021

In Genie version 9.3.9, all nation-wide and state-specific radiology request templates will now download automatically when the first user opens the [Radiology Request](#) window after updating. These templates have been created as Custom Forms, and are a part of our overarching goal of becoming a 64-bit compatible software solution.

While these new forms are now easier to create and customise, this does mean that **all previously inbuilt and custom created radiology templates (e.g. with your letterhead / logo) are no longer available.**

If you previously used customised templates in v9.3.8 or below, you can follow the steps at <https://geniesupport.geniesolutions.com.au/hc/en-us/articles/360054009432-Creating-Custom-Radiology-Templates>

New templates that Genie create will be made available for download from the Special menu > Software Updates > Forms > Radiology Request Templates. The list of [Downloadable Radiology Request Templates](#) is updated regularly with these newly created forms.

Genie users can use the AU Plain A4 template in the meantime if the template is not available.

To view how to easily choose and create new radiology templates in the latest version of Genie, click on the link below
